Software Release #

Data Flow

Installation

Gliders Deployed

AUVs Deployed

Commissioning

This figure is a simplified graphic representation of the schedule for installation of OOI infrastructure arrays and software releases. The placement of icons represent when, by calendar year and quarter, the basic types of infrastructure (e.g., submarine cable, moored array, glider, software release) are initially installed, when data becomes available, and when the infrastructure element/array is commissioned. Commissioning is the milestone event signifying the full operational readiness of the array, major array element, and software release. For details of what will be deployed during each installation event, see the OOI Installation Schedule Table.

**Note:** This graphic does not, and is not intended to, portray a ship cruise schedule. In some cases, multiple installation events may be combined on a single installation cruise.
